

Maternal Health Mapper

To use the Maternal Health Mapper:

1. Open tool
2. Select state
3. Open data categories
4. Check boxes to add data
5. Click county on map to activate information pop-up
6. View tabular data, if desired

The screenshot shows the Maternal Health Mapper interface. On the left, a vertical toolbar contains icons for home, list, location, layers, and settings. The main panel is titled "Maternal Health Mapper" and includes a state selection dropdown set to "Colorado". Below this, a "Maternal Health" section allows users to select data categories: "Low birthweight (%)" (checked, slider at 7.9), "Teen Births (per 1k females)" (unchecked, slider at 26.5), and "Maternity Care Deserts" (checked, slider at 1). A "Where Do Indicators Overlap?" bar chart shows 0, 1, and 2 indicators for different areas. A pop-up window for "Elbert - Colorado" displays population (25,717) and maternal health statistics (8.6% low birthweight, 1 maternity care desert). The map shows Colorado counties with a blue color scale, and a specific county is highlighted in light green. A bottom navigation bar includes "EXPLORE RELATIONSHIPS".
